

## Introduction

The Liberty 177A is a sturdy and flexible two-piece arm that is hinged at the wall to allow a wide range of sideways movement. Engineered to provide optimum viewing, there is four-way movement at the screen, enabling full tilt and swivel functions plus portrait to landscape rotation.

The Liberty 177A accommodates screens that are VESA compliant and have mounting holes that measure 75x75mm and 100x100mm. For slightly larger panels, the Sterling 170-EB 80 adapter can be added to accommodate a 200x100mm mounting configuration.

This model is constructed from powder-coated steel and is supplied with mounting hardware and accessories. It has a weight loading of 45lbs / 20kg.

## Application

As the Liberty 177A fits a wide range of (VESA compliant) small flat panels, it is a very versatile mounting solution for both commercial and domestic environments. Made from laser cut steel it is extremely heavy duty and overcomes the common issues of 'drop and sag' often associated with articulating a flat panel.

This model is particularly popular in the home, in living rooms, bedrooms and the kitchen where small flat panels are used. It also suits hard-wearing environments such as offices, and shops, for computer monitors and point-of-sale displays. Other applications include hotels, galleries, exhibition halls as well as boats and motor homes.

## Technical Specifications

The following list outlines the most important features of this product. It is by no means exhaustive. For further information please view the Technical Drawing.

<b>VESA Compliant</b>	Yes
<b>Mounting method at base</b>	Direct to wall
<b>Movement at base</b>	Swing left /right
<b>Rotation</b>	Landscape to Portrait
<b>Mountings (mm)</b>	75x75, 100x100
<b>Arm sections</b>	One
<b>Length of sections</b>	185mm / 7.25"
<b>Movement at screen</b>	Tilt up / down and swing left / right
<b>Loading</b>	20kg / 45lbs
<b>Colour</b>	Black
